

P-splines with PRIDE and Schall updates (Greece deaths data)

Counts of male deaths in Greece, in 1960, versus age, fitted by a model with a smooth trend plus individual random effects. Top left: raw counts and the trend. Top right: logarithms of raw counts and fitted trend. Bottom left: the individual random effects versus age. Bottom right: the individual random effects versus age modulo 10, to emphasize the repeating pattern of digit preference. R code in f-Greece-PRIDE.R

```
# P-splines with PRIDE and Schall updates (Greece deaths data)
# A graph in the book 'Practical Smoothing. The Joys of P-splines'
# Paul Eilers and Brian Marx, 2019
