

## Effective dimension with increased penalization

---

ED vs.  $\log_{10}(\lambda)$ , by penalty order using 20 segments on the basis. R code in **f-Peffdim.R**

```
# Effective dimension with increased penalization
# A graph in the book 'Practical Smoothing. The Joys of P-splines'
# Paul Eilers and Brian Marx, 2019

library(MASS)
library(ggplot2)
library(JOPS)

# Get the data
data(mcycle)
x = mcycle$times
y = mcycle$accel
