

Whittaker trend and sinus, signal separation (ECG data)

Disturbance removal in a small section of an ECG by separating two signals using different penalties. Panels in left column: data (grey) and results of Whittaker smoothing (blue) with two different λ s. Top-right: data (grey) and extracted ECG (blue). Lower-right: extracted 60Hz disturbance. R code in f-fit-hum.R

```
# Whittaker trend and sinus, signal separation (ECG data)
# A graph in the book 'Practical Smoothing. The Joys of P-splines'
