

GAMLSS smoothing for percentile curves (Motorcycle data)

Estimation of a smooth percentile curves (5, 50 and 95 %) for the conditional data distribution of the motorcycle data using `gamlss`. Top: smoothly varying standard deviation. Bottom: constant standard deviation. R code in `f-mot-gamlss.R`

```
# GAMLSS smoothing for percentile curves (Motorcycle data)
# A graph in the book "Practical Smoothing. The Joys of P-splines"
# Paul Eilers and Brian Marx, 2019

library(ggplot2)
library(colorspace)
library(gamlss)
library(JOPS)
library(gridExtra)

# Get the data
data(mcycle)
x = mcycle$times
y = mcycle$accel
dat = data.frame(x = x, y = y)

# Fit GAMLSS
gx = gamlss(y ~ pb(x), sigma.formula = ~ pb(x), data = dat)
g1 = gamlss(y ~ pb(x), sigma.formula = ~ 1, data = dat)
g1 = gamlss(y ~ pb(x), data = dat)

# Compute centile curves on grid
xg = seq(2.5, 57.5, by = 0.1)
