

## Density estimation with a sharp boundary (Suicide data)

---

Optimal P-spline density based on AIC for suicide data using different lower domain limits (20 cubic segments,  $d = 2$ ). R code in `f-suicide-opt.R`

---

```
# Density estimation with a sharp boundary (Suicide data)
# A graph in the book 'Practical Smoothing. The Joys of P-splines'
# Paul Eilers and Brian Marx, 2019

library(ggplot2)
library(gridExtra)
