

## Harmonic penalty smoothing (Variable star data)

---

Smoothing the magnitude of a variable star with missing observations. Top: Using standard P-splines with 100 B-spline segments and a second order penalty,  $\lambda = 0.1$ . Bottom: Using a harmonic penalty, assuming a period of 100 days. R code in `f-varstar.R`

---

```
# Harmonic penalty smoothing (Variable star data)
# A graph in the book 'Practical Smoothing. The Joys of P-splines'
# Paul Eilers and Brian Marx, 2019
